

Sustainability at Higher Education Institutions: develop – network – report

HOCH

AP Governance

Our research on the governance of sustainability at higher education institutions is based on

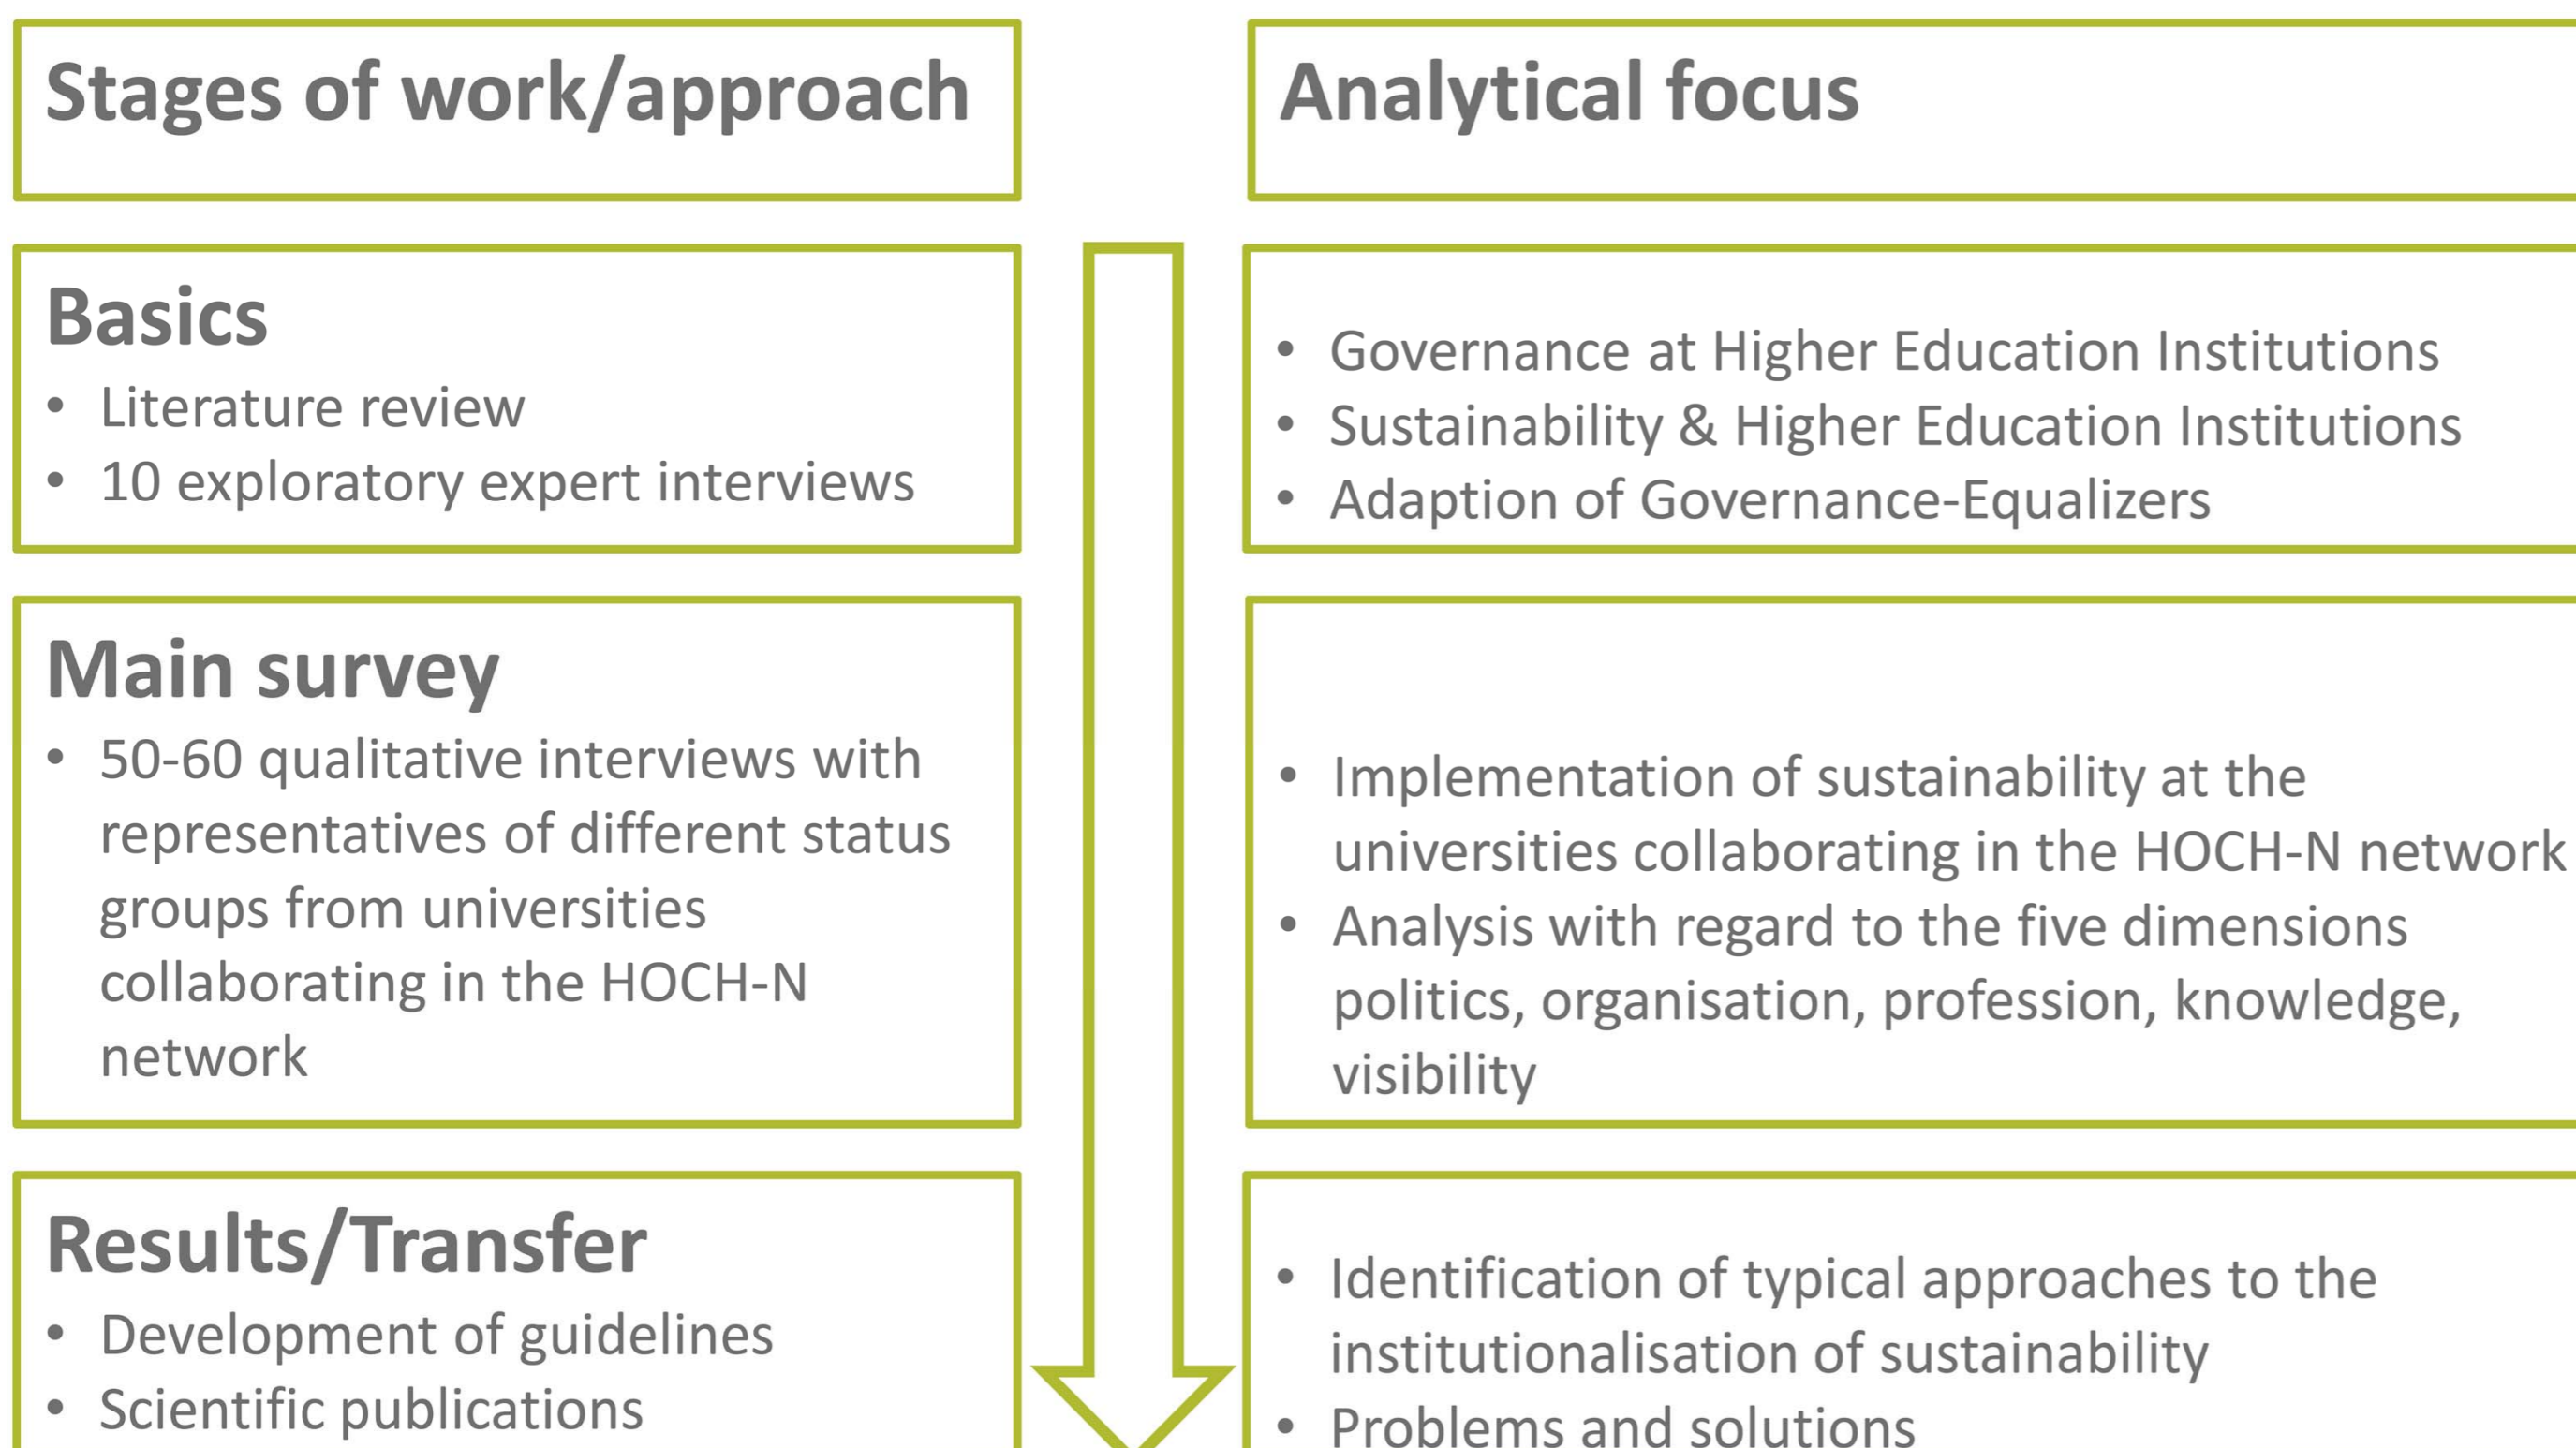

- ... an understanding of governance adopted from social science
- ... using a specific research heuristics of “governance equalizers”
- ... as functional requirements and analytical areas
- ... with a focus on five dimensions: politics, profession, organisation, knowledge and visibility

Research question

In which ways is sustainability institutionalized at Higher Education Institutions (of HOCH^N) and which factors play a leading role?

- How do universities deal with the demand to institutionalize sustainability?
- Through which ways and practices do universities achieve sustainability?
- What are factors of success in the institutionalisation of sustainability?

Methodological approach
